

Customer Purchasing Behaviour Analysis Using Microsoft Power BI

Project Data Dictionary

Prepared by: Mohamed Heriyanto Bin Jamal Mohamed

This document summarises the datasets, calculated columns and measures used in the Power BI dashboard. The Customer table is linked to the Purchase table using customer_id in a one-to-many relationship.

Customer Table

Field	Type	Purpose
customer_id	Text	Unique customer identifier
first_name	Text	Customer first name
last_name	Text	Customer last name
gender	Text	Customer segmentation
age	Whole No.	Age analysis
country	Text	Country analysis
income	Currency	Income segmentation

Purchase Table

Field	Type	Purpose
order_id	Text	Unique order identifier
customer_id	Text	Links to Customer
product_name	Text	Product analysis
description	Text	Product details
price	Currency	Revenue
quantity	Whole No.	Sales volume
tax	Percent	Transaction tax
shipping_cost	Currency	Shipping analysis
order_date	Date	Sales trend
shipping_date	Date	Delivery reference

Calculated Columns & Measures

Item	Purpose
Age Group	Customer age segmentation
Income Group	Low, Middle and High Income groups
Year / Month Name / Month Number	Time-based analysis
Total Revenue	Total sales revenue

Total Orders	Counts all orders
Total Customers	Counts distinct customers
Average Order Value	Average spend per order
Total Shipping Cost	Total shipping cost
